# Accessibility Testing for Learning and Development

Britne Jenke

Hi, I'm Britne! I recently completed the CPACC certification and now I'm working on the Section 508 Trusted Tester program. My company, Inclusive Pixelation, provides services in accessibility consulting and testing. I'd love to share some tools with you!

What is your current level of experience in accessibility (creation, testing, etc.)?

What is Accessibility Testing?

Accessibility testing is the practice of ensuring that digital content is usable by people with disabilities. This includes testing the usability of websites, eLearning modules, PDFs, and other types of digital content.

Why should I test my learning materials?

What accessibility issues have you encountered?

8 responses

small fonts

tiny font

finally cc capable

white text on yellow back

no captions

text too small   too small

light grey text on white

4

Common Accessibility Issues

→ ALT Text

→ Captions and Transcripts

→ Text Size and Headings

→ Color Contrast

→ Interactive Elements
